LIST OF SPECIAL SCIENTIFIC REPORTS AND SPECIAL SCIENTIFIC REPORT--FISHERIES OF THE U.S. FISH AND WILDLIFE SERVICE

Special Scientific Reports (1940-49) are preliminary reports, progress reports, and reports on investigations of restricted scope, intended to aid management and utilization; and to help guide administrative or legislative action; issued in limited quantities for Federal, State, and cooperating agencies. In 1949 the Special Scientific Report series was split into a fishery series and a wildlife series, each with a new numerical sequence. The new fishery series became the Special Scientific Report--Fisheries. (Reports preceded by asterisks are out of print, but can be borrowed from some public and college libraries.)

The Special Scientific Report--Fisheries series has limited distribution and the reports are mailed direct to workers in the field of fishery research and conservation and libraries. They are not sent to commercial concerns for selling or lending.

Created in 1849, the Department of the Interior--a department of conservation--is concerned with the management, conservation, and development of the Nation's water, fish, wildlife, mineral, forest, and park and recreational resources. It also has major responsibilities for Indian and Territorial affairs.

As the Nation's principal conservation agency, the Department works to assure that nonrenewable resources are developed and used wisely, that park and recreational resources are conserved for the future, and that renewable resources make their full contribution to the progress, prosperity, and security of the United States--now and in the future.
